Seoul, South Korea

Dear Hiring Manager,

I am applying for an iOS developer position because I want to put the skills I have into apps which have a large user base as well as working with a large team of developers, contributing new ideas, fixing bugs in the app and keep learning from senior developers .

I am a native iOS Developer having experience on writing full functional social networking apps and able to use various technologies such as ARKit for making Augmented reality experience, CoreML for intelligent AI apps as well as other libraries and frameworks which are written in either Swift or Objective C language.

Apart from being pure native iOS developer I have experience using other languages such as nodeJS to deploy server logic to cloud based database. I can also create websites using HTML, CSS and Javascript programming language. Other languages includes Python, C and Matlab.

My favorite iOS open source libraries includes "IGListKit" which is a data driven collection view that uses diffing algorithm to calculate changes based on data model and update user interface accordingly. Another library is called "Texture" previous "AsyncDisplayKit" this library unlike Apple's framework "UIKit" it handles all the view rendering in the background thread therefore leaving the user interface smooth even for complex designs and expensive data such as images and videos. For the case of website development my favorite front end libraries are Bootstrap and JQuery.

I look forward to use the skills I have learned over the years to contribute to the company's code base.

You can contact me via my email address mussacharles50@gmail.com or my phone number +82 10-3475-2914

Thank you

Sincerely

Charles, Mussa Mayunga
